**Preamble**

This document is the Abbreviated Resettlement Action Plan (A-RAP) for the rehabilitation of the South River Road Bridge in Kingstown, Saint Vincent and the Grenadines (SVG). It is being prepared in collaboration with the Project Affected Persons (PAPs) and Ministry of Economic Planning, Sustainable Development, Industry, Information and Labour (MoEP).

The aim of this document is to outline the procedures, actions and commitments to be followed during the operationalization of the project to reduce the negative impact on the PAPs. These procedures are aligned to the safeguards of the World Bank’s Operational Policy (OP 4.12). Further, it ensures that by detailing all procedures, actions and commitments, the objectives of the World Bank’s Operational Policy (OP) on involuntary resettlement (OP 4.12) are achieved to the end that all PAPs improve or at least maintain their pre-project level livelihoods.

This A-RAP is a working document, which will be updated as further information is gained during planning, implementation and consultations.

A. Introduction

i. Regional Disaster Vulnerability Reduction Project

In September 2011, the Government of SVG (GoSVG) entered into a financial arrangement with the World Bank, the proceeds of which were invested into the execution of the Regional Disaster Vulnerability Reduction Project (RDVRP). The project originally financed at USD 20.92 million (effective 18th October, 2011) received additional funding in the amount of USD 40.6 million (effective 12th November, 2014) for a total of USD 61.5 million. The project is an amalgamation of the Disaster Vulnerability Reduction Project and the Pilot Programme for Climate Resilience (PPCR) and is funded through a mixture of loans and grants from the International Development Association (IDA) and the Strategic Climate Fund (SCF). Presently, the closure date of the project is December 31, 2018.

The project aims to increase resilience to climate change by supporting capacity development and tools to assess and communicate disaster and climate risk to the public and to decision makers in different sectors, and to improve the integration of natural hazard and climate risk into physical planning processes. In addition, the project is designed to contribute to vulnerability and risk reduction through a combination of civil works and institutional development activities at the national and regional levels. These activities are designed to reduce the response time in the wake of a disaster and to improve regional and national resilience to natural hazards and longer-term impacts resulting from climate change.

In short, the aim of the RDVRP is to measurably reduce vulnerability to natural hazards and climate change impacts in Saint Vincent and the Grenadines and the Eastern Caribbean sub-region.

---

1 The breakdown of finances is as follows: PPCR Grants USD 12 million, SCF loan USD 3 million, IDA loans USD 46.52 million.
2 Project Appraisal Document, RDVRP
The project consists of four components:

**Component 1** – Prevention and Adaptation Investments

**Component 2** – Regional Platforms for Hazard and Risk Evaluation, and Applications for Improved Decision Making

**Component 3** – Natural Disaster Response Component

**Component 4** – Project Management and Implementation Support

The RDVRP consists largely of infrastructural projects and technical assistance activities, some of which were derived from SVG’s Strategic Programme for Climate Resilience developed under the PPCR. A total of USD 15 million of RDVRP funds is dedicated to PPCR activities.

**ii. Description of the South River Road Bridge Project**

*Description*

The South River Road Bridge is located in Kingstown, the capital city of SVG. The bridge is an important daily transportation route used mainly by pedestrians with vehicular and pedestrian traffic on the bridge increasing significantly around the June/July carnival celebrations. The current bridge does not have any immediately visible signs of structural damage; however, a soil investigation that was part of an overall hydraulic assessment of the site uncovered signs of liquefaction, which in essence means that the soil upon which the bridge rests is losing strength and stiffness. Consequently, the overall integrity of the bridge is questionable and must be addressed.

The project involves the demolition and reconstruction of the South River Road Bridge with a final length of 10 m. Due to space constraints in the location of the current bridge, the new bridge will be built with the same width albeit with wider abutments to facilitate any future expansions in the width of the bridge and will be fitted with sidewalks on either side. The works on the bridge is expected to begin in January 2016, last for a period of 6 months and be completed at the latest by June 2017. Other works to be done includes approximately 20 m of road improvement on either approach to the bridge.
The South River Road Bridge also serves as a popular location for vending. Given the nature of the works to be done on the bridge, some of the PAPs will have to be temporarily relocated to facilitate construction (Table 1). Furthermore, all relocations will be done in close proximity to the existing bridge, which minimizes both the impact of the relocation on the PAPs as well as the cost of relocation.

The project is intended to improve the structural integrity of the existing bridge. Consequently, it is anticipated that the Vincentian populace would benefit from the project through the reduction of the potential risks associated with its use.

i. World Bank Policy and an Abbreviated RAP

The World Bank’s Operational Policy (OP) on Involuntary Resettlement, OP 4.12, recognises the potential for a development project to result in economic, social and environmental displacement if appropriate measures to mitigate these impacts are not carefully planned and executed. Accordingly, the policy is guided by the following three principles:

a. Involuntary resettlement should be avoided where feasible, or minimised, exploring all viable alternative project designs.

b. Where it is not feasible to avoid resettlement, resettlement activities should be conceived and executed as sustainable development programmes, providing sufficient investment resources to enable the persons displaced by the project to share in project benefits.

c. Displaced persons should be assisted in their efforts to improve their livelihoods and standards of living or at least to restore them, in real terms, to pre-displacement levels or to levels prevailing prior to the beginning of the project implementation, whichever is higher.

ii. Overview of the A-RAP

The preparation and adherence to the A-RAP is a reflection of the requirements of the World Bank’s OP 4.12. The underlying aim of the A-RAP is to ensure that in the event of any physical or economic displacement of people, their pre-project incomes and standards of living are maintained or improved throughout the life of the project and thereafter. In other words, it is intended to capture pre to post project procedures that are designed to ensure the minimisation of any adverse impacts of involuntary resettlement or temporary relocation as in this case.
B. Census of displaced people

The PAPs were identified by the Ministry of Transport, Works, Urban Development and Local Government (MoTW) including the Town Board Division of the Ministry. The project area is fairly small so the method of observation, in addition to the list of vendors in that area kept by the Kingstown Town Board, was employed to ascertain the number of vendors and small business owners located either on or close to the existing bridge and thus would be affected by any works to be done on it. There is a total of 16 PAPs (individuals) excluding the group of taxi drivers and the hotel. All PAPs are vendors operating small businesses that, in most cases, need to be temporarily relocated to facilitate construction of the bridge. The existing taxi stand would also be relocated. However, there will be no physical relocation of homes or private land acquisition, since the PAPs are operating on Crown land and will be relocated to Crown Land. A complete list of PAPs to be relocated along with a description of each is given in Table 1 below:

This new access point was decided on in collaboration with the owner of the hotel. The footbridge was constructed by the works contractor as part of their hoarding plan (see annex 9).</td>
</tr>
</tbody>
</table>
C. Resettlement (relocation) Assistance

The temporary relocation of some PAPs will occur due to the nature of the project (see Table 1 for details). To operationalize OP 4.12, relocation assistance will be given to all PAPs as needed, the overall aim of which is to ensure that the relocation is: (i) completed prior to the commencement of works at the site, and; (ii) least disruptive and sufficiently managed such that the livelihoods of the displaced persons are improved or at least maintained. All PAPs (except the hotel) are mobile vendors, that is, they operate from vehicles and or structures such as tents that are moved at the end of each business day and returned/reassembled at the start of each. This, coupled with the fact that the relocation site is in close proximity to the original location of the vendors obviates the need for physical assistance to the relocation site be given to every vendor. Details of relocation including relocation assistance given are highlighted in the following:

Conditions in the relocation site

I. 16 PAPs need to be relocated: The identified relocation site for most of these PAPs is Crown land and was being used prior to construction as a taxi stand with an area of approximately 86m$^2$. There is an additional 50m$^2$ of Crown land to be used as relocation space. This area is the sum of the land directly opposite the pre-construction hoarding taxi stand and also that which is adjacent to the hoarding site.

The relocation site for the vendors has been outfitted with demarcated spots to ensure that: 1) PAPs are not displaced by new vendors and 2) order is maintained at the relocation site. Further, and in conformance with decisions taken at Consultation no.9, the food vendors – PAP #5, PAP #10, PAP #11 – have been purposefully assigned spots furthest away from active construction. This is to ensure that they can continue to operate in conditions that are safe for consumers.

II. Taxi stand to be relocated: To accommodate the relocation arrangements described in (I), the taxi stand was relocated approximately 30m away from its original location, in an area that has been designated solely for that use for the life of the project (see annex 6 for details) and is also Crown land. The relocated taxi stand has been marked with taxi stand signs to ensure that the taxi drivers will not be displaced by non-taxi drivers (see annex 9).

III. Large tree located close to the bridge: As expressed in Consultation no. 1, the aim was to preserve the tree in the process of demolition of the old and the construction of the new
bridge. However, upon further examination by the MoTW and the Forestry Division, it was revealed that the location of the roots of this white cedar tree are in and along the old bridge, this uncontrolled routeing of the roots poses a threat to the preservation. As communicated at Consultation no. 9, if the tree is deemed to be a hindrance to construction, it will be removed and given to government to be used in the Prisons Workshop. The possibility of replanting a tree post-construction of the new bridge is being explored.

IV. Construction activities: As expressed throughout the consultative process and again at Consultation no. 9, there is an environmental management plan developed for the project that will be enforced. In summary, the following will be done to ensure that construction activities are least disruptive to the lives of the PAPs and to general Vincentian population:

- Demolition will be done on weekends
- Steel bending will be done offsite
- Ready-mix concrete will be used

V. Specific conditions of relocation sites: Both relocation sites are in close proximity to the current bridge and so will be minimally disruptive to the lives and livelihoods of the PAPs. See Annex 4 for details of the proposed relocation site. Further, all PAPs (except PAP #19) are mobile and the close proximity of the relocation site to their current location enables the PAPs to easily transfer their items to the new relocation site. There are two (2) PAPs that have had their utilities reconnected in the new site: 1) PAP # 1, which only had an electricity connection and 2) PAP #10 that had telephone, water and an electricity connection. Details of additional relocation assistance to PAPs who required it are as follows:

a. PAP #19 – In order to maintain access to this PAPs, a footbridge (decided in consultation number 3 with the PAP – see annex 2 for details) was constructed by the contractor as part of its hoarding site preparation.

b. PAP #10 – This PAP some additional items which needed to be moved to the temporary vending site. The MoEP in collaboration with the contractors ensured that all items, including the necessary utilities (electricity, water, telephone) were relocated.
to the temporary relocation and reinstated site at no additional cost to the PAP. (see annex 7 for details of the letters sent from the MoEP to the utility providers). The water and telephone connection at this relocation spot was completed by January 6, 2017 and the electricity connection was completed shortly thereafter.
c. All spots in the relocation site have been assigned after consultation by the MoEP with PAPs and Town Board.
d. All PAPs except nos. 6, 7 and 8 have been relocated. These PAPs were not identified during the initial census because they were not physically present when it was carried out. However, evidence was later supplied by the Town Board indicated that they were operating on the site for some time prior to construction hoarding. Even so, without any contact information for any of them, neither the MoEP nor the Town Board have not been able to locate them, despite the numerous efforts to do including visiting the relocation site and soliciting the help of other PAPs. This investigation revealed that these individual are somewhat seasonal. Nevertheless, their relocation spots remain assigned to them in the event that they are located. To this end and in addition to the 'grievance sign' located close to the relocation site, the MoEP will liaise with the Kingstown Town Board to ensure that these PAPs are quickly relocated if and when they are located.
e. The PSIPMU has been and will continue to visit the relocation site to assess the extent to which the relocation plan is being effectively implemented.

D. Participation and Consultation
The involvement of the key stakeholders in the planning and implementation of the project is essential to ensuring the objectives of the project are realized including the preservation of at least the pre-project quality of life of the PAPs and where possible the improvement of it. Participation of, and consultation with the PAPs is an indispensable method of achieving this. Table 2 descriptively documents completed and expected consultations. 13 of the total 16 PAPs have been consulted; all except for PAPs 6, 7, 8 (see section C, subsection 'f' for explanation). PAPs also have access to the contact information of the PSIPMU in the event that they have any grievances that they would like to have noted outside of a formal consultative process and appropriately addressed and resolved.
The list is by no means exhaustive since additional consultations will be conducted during and after construction at the South River Road Bridge site, as deemed necessary for the effective implementation of this ARAP.

6 The public notice documented in annex 5.a was delivered to the PAPs by the Social Specialists in the MoEP
### E. Implementation and Grievance Redress

During the demolition and reconstruction of the South River Road Bridge, due diligence would be taken in monitoring the project’s impact to ensure that no PAP’s quality of life is disadvantaged via:

1. Minimizing the distance between the PAP’s current location and the relocation site.
2. Using ready-mix concrete, which reduces the time for construction, the minimization of dust from loose material (cement, sand), and the size of the construction hoarding site (Annex 3), thus the number of individuals requiring relocation.
3. The implementation of traffic management by the Traffic Department of the Royal SVG Police Force.

The implementation of all relocations will be spearheaded by the MoTW with due monitoring of the process and methods of relocation by the MoEP to ensure compliance with the laws of SVG and adherence to the standards embodied in the World Bank’s OP 4.12.

All grievance redresses will follow the procedures laid out in the "RDVRP: Grievance Redress Mechanisms" manual.
F. Monitoring and Evaluation

Monitoring and evaluation are key elements in the implementation of the A-RAP activities and will be continuous. The PSIPMU and the MoEP Social Specialists will continuously review expropriation/compensation reports and discuss their outcomes in their technical meetings. Though not anticipated, the MoFEP, MoHILP and the Ministry of Legal affairs will directly monitor any compensation costs for loss of income should these be reported by any PAP. The MoEP Social Specialists will review project activities, including social mitigation measures, and provide guidance where necessary. Chart 1 below highlights the organizational position of the Social Specialists/Social Safeguards Team within the RDVRP.

Chart 1: The organizational chart of RDVRP

Monitoring and evaluation would provide information on the extent to which:

1. Temporary relocation and project activities are on track;
2. Grievances are appropriately recorded and addressed;
3. Corrective actions including any adjustments to the implementation approach is necessary and the form that it should take.
i. Responsibility for Monitoring
The MoTW and the PSIPMU have overall responsibility for the implementation of the project. Therefore, the Social Specialists is responsible for monitoring and documenting the process of implementation to ensure that the A-RAP is implemented to the end that the livelihoods of the PAPs are at the very least maintained.

ii. Monitoring Process
Monitoring will be of two foci (Table 4). First, there will be performance monitoring. This monitoring will be based on the resettlement implementation plan and will check that physical progress has been made in execution of required actions. The main performance indicators to be checked will be:

- Consultation meetings held with PAPs and other stakeholders and meeting minutes prepared;
- All affected assets surveyed and valued.
- Relevant notices published in the Government Gazette and other appropriate media;
- Grievances addressed according to the procedures established in the RDVRP Grievance Redress Mechanism.

Second, there will be impact monitoring to assess the effectiveness of the A-RAP and its execution in addressing the needs of the affected population. The methodology for impact monitoring will include:

- Review of number and type of complaints made and effectiveness of the grievance redress mechanism;
- Review of the appeals process and timeframe for settling appeals.

MINISTRY OF TRANSPORT, WORKS, URBAN DEVELOPMENT AND LOCAL GOVERNMENT
HALIFAX STREET
KINGSTOWN
ST. VINCENT & THE GRENADINES

OUR REF: TW1

January 23rd 2015

Dear Sir/Madam,

This letter serves to remind you of a meeting scheduled to take place at the Central Planning’s Conference room, on the second floor of the Financial Complex on Wednesday 28th of January, 2015 commencing at 4:30 pm.

The meeting will discuss the reconstruction of the South River – Middle Street Bridge located at "Heritage Square" in the vicinity where you presently vend.

Your attendance is critical to this process and would be grateful if you attend.

Respectfully yours,

[Signature]

Mr. Hudson Nedd
Permanent Secretary
Ministry of Transport, Works, Urban Development and Local Government

Tel: 784 456 1111 Ext. 459 E-mail: MCWSVG@CARIBSURF.COM
Fax: 784 456 2188

Annex 1.b. Minutes of consultation no.1
Minutes of the social safeguards stakeholders consultation for the rehabilitation of the South River Middle Street Bridge, Kingstown

Central Planning Division (CPD Conference Room)
Date: 28th January, 2015

The purpose of this meeting was to:

- Formally inform the vendors about the plans to rehabilitate the South River Middle Street Bridge and the proposed relocation site for directly affected vendors
- Create an initial forum where all stakeholders, especially the vendors can air their concerns

<table>

<table>
<thead>
<tr>
<th>6</th>
<th>Critical factors to consider</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mr. Osei Morris (OM), Project Manager/MOTW highlighted the importance of considering the impact of dust, noise and traffic on the vendors. He stated that this was especially important given that most of the vendors to be impacted by the project are food vendors.</td>
<td></td>
</tr>
</tbody>
</table>

HN assured that these factors will be taken into consideration by the contractor in its environmental management of project. Sekai Chiaka Bowman (SB), Procurement Officer/CPD added that the contractor must implement an environmental management plan which would include the methods that the contractor will use to mitigate these factors.
effects. CH also added that dust would be at a minimum as demolition would be conducted on weekends and that the concrete works would involve the pouring of ready-mix concrete.

### 7 Specific vendors

i. PAP #1, identified that due to the nature of his operation, it is necessary that he has electricity wherever he is relocated.

CH informed that the plan by the ministry was to use an existing booth belonging to the Carnival Development Committee to relocate PAP #1. CH further informed that the necessary structural reinforcement of the booth would be done before PAP #1 is relocated there.

ii. It was highlighted that PAP #10, a food vendor, also has both water and electricity at his current location. This meant that any relocation of him would need to have these in place.
   - The representatives from the MOTW noted that this was known and is a consideration in this particular vendor’s relocation.
   - CH also assured that the tree located where Mac’s Snacks currently operates is not expected to be harmed by the project.

iii. As it relates to taxi operators, CH informed that the construction hoarding site is such that there would be no need to relocate the existing taxi operators during the life of the project.

iv. The consultation was informed that the restaurant below the hotel adjacent to the existing bridge is currently closed and its operations have been relocated.

v. The issue of ‘Friday vendors’ was brought to the attention of the meeting. HN assured that this would be taken into consideration in the management of the project site.

### 8 Storage and construction hoarding site

CH highlighted that the use of ready-mix concrete would dismiss the need for storage of related materials (cement, sand, aggregate). He informed that there would only be the need to identify storage for reinforcement material, which would reduce the size of the hoarding site.

### 9 Utility lines and pipes

Mr. owner of Famous Richie’s BBQ, stated that his water connection currently traverses the existing bridge.

CH informed that the two utility companies Central Water & Sewage Authority (CWSA) and St. Vincent Electricity Services (VINLEC) have been consulted with on the upcoming project and that they have indicated that they would reroute their

Annex 2: Minutes of the consultation with PAP # 19

Minutes of the consultation No. 3 with PAP #19 (Hotel and Restaurant)

Date: 22nd April 2015

Start time: 1:45pm

Attendees:

PAP #19

Central Planning Division (CPD)

- Mr. Richard MacLeish/Project Coordinator (RM)
- Mr. Cecil Harris/Senior Engineer (CH)
- Ms. Chiaka Sekai Bowman/Contract Manager (CB)
- Ms. Ronette Jordan/ Project Officer-Social Development Specialist (RJ)
- Ms. Cassia Toby/Assistant Social Development Specialist (CT)

Introductions:

RM commenced the meeting by introducing the team from the CPD and informed PAP#19 of the nature of RDVRP in general and how the project at hand, the South River Road Bridge fits into it. CT informed the PAP that the aim of the meeting was to create an environment where he can ask questions about the project and air his views on any aspect of the same that may be of concern to him.

PAP’s major concern: The impact of the project given the nature of his business

PAP#19 responded that he is privy to the works to be done on the bridge and that his major concern relates to the nature of his business in the context of the works to be done given that he cannot be relocated as other businesses that are mobile can. The PAP was assured by CH that the works would be done in a way that minimizes any negative impacts on the surrounding businesses and areas. To this end, CH gave some details regarding the works such as the fact that the bridge would be a concrete bridge made with ready-mix concrete which reduces the construction hoarding site and that demolition of the existing bridge would be done on the weekend. CH then roughly explained the draft hoarding site (which he expanded on during a physical walkthrough of the site area). He also informed that there would be 10 m of road improvement on both approaches to the bridge. It was also suggested that a pedestrian foot bridge be inserted as part of the contract requirement to ensure access to the small courtyard of the hotel. CB also added that an environmental management plan is a part of the contract for the works and would cover the mitigation of externalities such as noise, dust, garbage and other construction run-offs. PAP#19 informed that he had some concept designs regarding the bridge. CH encouraged the PAP to make those designs known to the consultant.

Conclusion: The works would be designed and executed in a way that reduces the impact of the project on surrounding businesses and areas as indicated in the measures described in the paragraph above..
Contract commencement and duration

CB informed that the project is expected to commence in November, 2015 and last for a period of 6 months.

PAP#19 informed that he did not have any objections to the project and felt that the mechanisms to be put in place are in his business’ interest and would contribute to the general improvement for the area.

CB further informed that the government of Saint Vincent and the Grenadines would soon enter into contract to produce the final designs (and supervision) of the project.

Physical walkthrough of the project area

A physical walkthrough of the area was facilitated by the CPD headed by CH.

The issue of hoarding and access was again discussed with the PAP particularly as it relates to access to his hotel.

Conclusion: *The creation of a pedestrian crossing with hand rails to facilitate access to the hotel and the erection of barricades for safety purposes.*

Final designs and a follow-up meeting

CH assured that the final designs of the bridge would be made known to the PAPs and SB added that the consultant would meet tentatively in June 2015 with the PAPs to present and discuss the designs.

Adjournment: 2:18pm
Annex 3: Proposed Construction Site Hoarding
Annex 4: Relocation Plan
Annex 5a.: Letter of invitation to consultation no.9

PUBLIC NOTICE

As you maybe aware the government plans to rehabilitate the South River Road Bridge in January of 2017. This reconstruction will impact your daily operation. As a result we will like to meet with you on Tuesday 13th December, 2017 at 2:00 pm at the middle street bridge, to discuss the changes and how they will affect your operations.

De-Anna, Ralph
Social Safeguards Specialist
Ministry of Economic Planning
# Meeting with Project Affected Persons (PAPs) on the South River Bridge

</tbody>
</table>
| i. Ms. DeAnna Ralph informed the PAPs that the construction of the South River Bridge was expected to commence in the first week of January, 2017. Vendors nearest the construction zone will be relocated to the vacated taxi stand.  
- Some vendors expressed a desire to move from the space they were assigned to another available space, within the vacated taxi stand. One vendor, currently located opposite the RBTT bank, expressed a desire to remain in the same general area. | |
| ii. Mr. Cecil Harris explained the expected scope of works to the PAPs and mentioned the following:  
- The hoarding is expected to be put up after Christmas, for the January start date.  
- The taxi stand will be relocated to the area opposite the branch of the business Edwin D. Laynes & Sons Ltd nearest the South River Bridge.  
- In an effort to minimize the negative impact of the construction on PAPs the contractors are expected to do demolition on weekends, do steel bending offsite and use ready-mix concrete.  
- Food vendors will be located furthest from the construction zone, to minimize the impact of dust on their food production.  
- We will attempt to save the tree on the bridge but if it hinders the construction it will be cut down and replanted after the construction.  
- We will look into clearly demarcating the assigned spots for each relocated vendor. | |
| **3. Adjournment** | |
The meeting ended at approximately 3:00 pm.
Annex 6: Relocation of taxi stand memo

GOVERNMENT OF ST. VINCENT AND THE GRENADINES

FROM: PS/ Transport, Works, Urban Development and Local Government

TO: Comptroller, Inland Revenue Department

SUBJECT: REGIONAL DISASTER VULNERABILITY REDUCTION PROJECT – SOUTH RIVER BRIDGE RECONSTRUCTION RELOCATION PLAN

The Government of Saint Vincent and the Grenadines has obtained funding from the World Bank to implement the above captioned project. In order to reduce challenges in the project, it is necessary to relocate some of the activities taking place in South River Road including the taxi stand along the river between Bay and Middle Streets. It was agreed by the stakeholders including the taxi operators, that for the duration of the project, the taxi stand would be temporarily relocated on Bay Street, along the SVG Port Authority Container Park, opposite the St. Vincent Cooperative Bank. (See map enclosed).

In keeping with Sections 24 and 54 of the Motor Vehicles and Road Traffic Act – Subsidiary Legislation CAP 483 of the Revised Laws of Saint Vincent and the Grenadines, the Ministry of Transport, Works, Urban Development and Local Government is hereby requesting the designation of the proposed area described above as a temporary parking for the taxis being relocated from South River Road. Grateful if the relevant notices are gazetted to effect the changes on the ground.

Mr. Hudson Nedd
Permanent Secretary
Ministry of Transport, Works, Urban Development and Local Government

Annex 7: Letters to utilities companies
December 10, 2016

Garth Saunders
General Manager
Central Water and Sewerage Authority
New Montrose
P.O. Box 363
Kingstown

Dear Mr. Saunders,

SUBJECT: Regional Disaster Vulnerability Reduction Project: SVGRDVRF-W-NCR-11 – Construction of the South River Bridge

The government of St. Vincent and the Grenadines has awarded a contract to O.B. Sadoo Engineering Services Ltd. of St. Lucia for the construction of a new bridge over the South River at Middle Street, Kingstown.

The existing old stone arch bridge’s structural integrity has been compromised by age, floods, increased vehicular weight, and the impact of roots from a nearby tree. The new bridge will be approximately 18 inches higher and has been designed to withstand expected increases in flooding due to climate change events.

The works will commence substantively on January 9, 2017 with the demolition of the old bridge and is expected to last six (6) months.

The project is being implemented by my ministry, which has engaged the French firm, Eglis Eau, as consulting designers and works supervisors. Eglis Eau is represented by sub-consultant Stewart Engineering Limited during the construction phase.

We have been in consultation with your team, represented by engineer Bernard Moloney, who has scheduled works to be completed for the temporary diversion of your service lines by January 6, 2017. In consultation, we have discussed several options that may be best suited for works to be conducted before the demolition of the existing bridge commences.

Yours truly,

Ministry of Economic Planning, Sustainable Development, Industry, Information and Labour
P.O. Box 801, Kingstown, St. Vincent and the Grenadines
Tel: (755) 457-1745, Fax: (755) 459-0450, Email: econplanning@gov.org
The estimated cost of works for temporary diversions of your services lines in this project should be directed to my office.

Please note that the present site has already been hoarded and ready for your team to schedule and commence temporary diversion of your service lines.

Sincerely

Laura Anthony-Browne
Director of Planning
December 30, 2016

Wayne Hull
Country Manager
Flow
Halifax Street
P.O. Box 103
Kingstown

Dear Mr. Hull,

SUBJECT: Regional Disaster Vulnerability Reduction Project; SVGRDVRP-W-NCB-11 – Construction of the South River Bridge

The government of Saint Vincent and the Grenadines has awarded a contract to OB Sadoo Engineering Services Ltd. of St. Lucia for the construction of a new bridge over the South River at Middle Street, Kingstown.

The existing old stone arch bridge's structural integrity has been compromised by age, floods, increased vehicular weight, and the impact of roots from a nearby tree. The new bridge will be approximately 18 inches higher and has been designed to withstand expected increases in flooding due to climate change events.

The works will commence substantively on January 9, 2017 with the demolition of the old bridge and is expected to last six (6) months.

The project is being implemented by my ministry, which has engaged the French firm, Fgis Eau, as consulting designers and works supervisors. Fgis Eau is represented by sub-consultants Stewart Engineering Limited during the construction phase.

We have been in consultation with your team, represented by engineers Franklyn Fraser and Marlon Bihby, who have scheduled works to be completed for the temporary diversion of your service lines by January 6, 2017. In consultation, we have discussed several options that may be best suited for works to be conducted before demolition of the existing bridge commences.
December 30, 2016  Wayne Hull

The estimated cost of works for temporary diversions of your services lines in this project should be directed to my office.

Please note that the present site has already been hoarded and ready for your team to schedule and commence temporary diversion of your service lines.

Thornley Myers
Chief Executive Officer
St. Vincent Electricity Services Ltd.
Paul’s Avenue
P.O. Box 856
Kingstown

Dear Mr. Myers,

SUBJECT: Regional Disaster Vulnerability Reduction Project: SVGRDVRF-W-NCB-11 – Construction of the South River Bridge

The Government of Saint Vincent and the Grenadines has awarded a contract to OH Sadoo Engineering Services Ltd. of St. Lucia for the construction of a new bridge over the South River at Middle Street, Kingstown.

The existing old stone arch bridge’s structural integrity has been compromised by age, floods, increased vehicular weight, and the impact of roots from a nearby tree. The new bridge will be approximately 18 inches higher and has been designed to withstand expected increases in flooding due to climate change events.

The works will commence substantively on January 9, 2017 with the demolition of the old bridge and is expected to last six (6) months.

The project is being implemented by my ministry, which has engaged the French firm, Egis Eau, as consulting designers and works supervisors. Egis Eau is represented by sub-consultants Stewart Engineering Limited during the construction phase.

We have been in consultation with your team, represented by engineer Stanley Harris, while we await a schedule of works for the temporary diversion of your service lines. In consultation, we have discussed several options that may be best suited for works to be conducted before and during demolition of the existing bridge and construction of the new bridge at the site.
December 30, 2016

Thornley Myers

The options considered creating suspended power lines, encasing and shifting power lines a few feet upstream from the bridge, which may require relocation of lines South and North of the bridge. The time line to have these works completed has been estimated at four (4) weeks.

The estimated cost of works for temporary diversions of your services lines in this project should be directed to my office.

Please note that the present site has already been boarded and ready for your team to schedule and commence temporary diversion of your service lines.

Sincerely

Laura Anthony Browne
Director of Planning

Pleur Nichols
Manager
RBTT Bank Caribbean Ltd.
South River Road
Kingstown

Dear Ms. Nichols,

SUBJECT: Regional Disaster Vulnerability Reduction Project: SVGRDVRP–W–NCB–11 – Construction of the South River Bridge

The government of Saint Vincent and the Grenadines has awarded a contract to OR Sadoo Engineering Services Ltd. of St. Lucia for the construction of a new bridge over the South River at Middle Street, Kingstown.

The construction of the bridge will be executed by the World Bank funded Regional Disaster Vulnerability Reduction Project.

The existing old stone arch bridge’s structural integrity has been compromised by age, floods, increased vehicular weight, and the impact of roots from a nearby tree. The new bridge will be approximately 18 inches higher and has been designed to withstand expected increases in flooding due to climate change events.

The works will commence substantively on January 9, 2017 and is expected to last six months. We shall, through our Environmental Management Plan, conduct the works to minimize impacts to the surrounding businesses and the general public.

Your co-operation shall oblige.

Sincerely

Mr. Hudson Nedd
Permanent Secretary
Ministry of Transport, Works, Urban Development and Local Government
Kingstown

Dear Mr. Nedd,

Your letter dated 11th February 2015 with regards to the temporary use of the ticket booth at South River Road is hereby acknowledged.

The CDC would make the booth available for use by the locksmith [redacted] for the duration of the replacement of the Middle Street Bridge project which commences in July 2015.

The following conditions would however apply to the occupant:
- Changes to the present infrastructure should not be made without permission from the CDC.
- The occupant is in charge of paying for the electricity consumed during this period and
- The occupant is required to continue his obligations to the Kingstown Town Board and the Ministry of Works.

We take this opportunity to wish you every success in the project implementation process.

Yours sincerely,

CARNIVAL DEVELOPMENT CORPORATION

Ashford Ward
