

A FLASH-FLOOD WATCH is in effect for ST. VINCENT AND THE GRENADINES

Issued at 12noon, Sunday 4th August, 2024

Cloudiness continues to increase across St. Vincent and the Grenadines (SVG) and unstable conditions could maintain pockets of moderate-heavy showers, with thunderstorm activity across our islands this evening/tonight and during Monday. Rainfall accumulations of 50 – 75 mm (approximately 2-3 inches) with isolated higher amounts in mountainous areas are possible within the next 48 hours

Additionally, occasional gusty winds/strong breeze near 40km/h may accompany shower activity during Sunday night and Monday morning.

Therefore, the weather advisory that was already in effect for a low risk of flooding for St. Vincent and the Grenadines has been upgraded to a Flash Flood watch and will remain in effect until 6:00pm Monday 5th August 2024. **Residents and motorists in areas prone to flooding and landslides or near rivers and streams should be prepared.**

A Flood-Watch is issued when conditions are favourable and there exists the possibility of flooding during the watch period.

This flash-flood watch may be upgraded to a warning if conditions warrant.
