A WEATHER INFORMATION STATEMENT

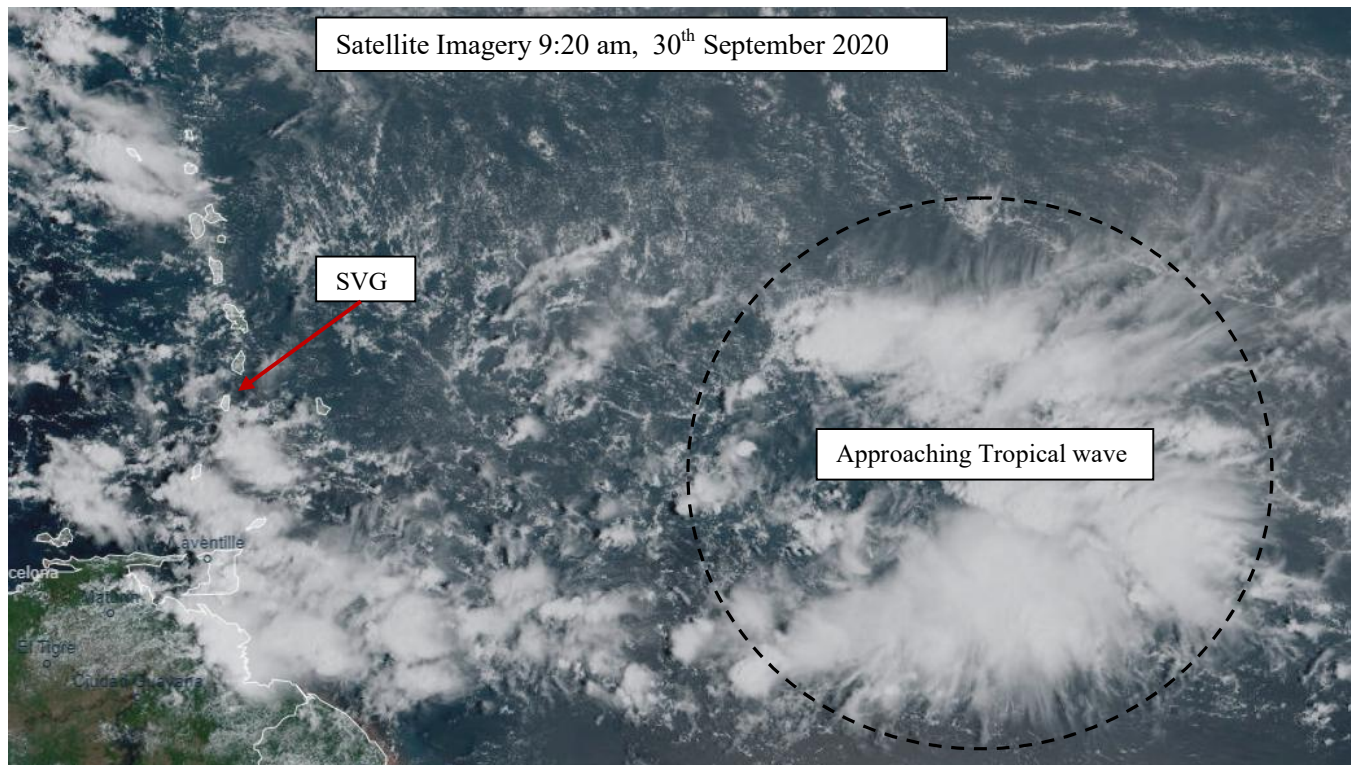

for St. Vincent and the Grenadines issued at 12:00 Noon Wednesday, 30th September, 2020

Unstable conditions associated with the passage of two tropical waves have been generating showers and thunderstorm activity across St. Vincent and the Grenadines during the last few days. By Thursday, another tropical wave interacting under very favourable upper level conditions is expected to add further deterioration to the weather conditions which could possibly result in flash-flooding and land slippage.

Residents and motorists in areas prone to flooding and landslides or near rivers and streams should remain alert throughout this week as the atmosphere is expected to remain moist and unstable.

As a result a Flash-Flood watch or warning may be issued at short notice as conditions warrant.

In addition, deterioration in sea-conditions is also expected, with swells peaking up to 2.5m (~9ft). Therefore, **small craft operators and sea-bathers should continue to exercise caution.**

The St Vincent and the Grenadines Meteorological Service will continue to monitor the progress of this tropical wave and provide updates as necessary
